

The Water Cycle

When it rains water falls,
from the clouds to the ground,
then it gets to a river and it flows to the sea.

Then the sun with its rays,
warms up water and its goes up,
from the sea, to the clouds and the cycle
starts again...

When it rains water falls,
from the clouds to the ground,
then it gets to a river and it flows to the sea.

Then the sun with its rays,
warms up water and its goes up,
from the sea, to the clouds and the cycle
starts again...
